

Care of Your Hoses

- Hoses should be stored indoors, ideally in a cool, dry, dark room with moderate humidity at temperatures between 10°C and 25°C.
- Hoses shipped in straight lengths should be kept straight.
- Hoses shipped in coils should be stored horizontally, where they can maintain their integrity and shape without kinking.
- Store hoses in original wrapping to protect from environmental exposure.
- Always use knives with caution to avoid cutting hose when opening wrapping.
- Do not store hoses on a hook.
- Try to avoid dragging fittings along the ground when in use.
- When possible keep hoses out of direct sunlight.
- Keep hose away from excess heat sources such as heat vents and heaters.
